Storage Solutions

1. Distributed Database

It's important to communicate the benefits of Distributed Ledger Technology (DLT) to your customers for ensuring a smooth transition to DLT and enhance trust and customer satisfaction.
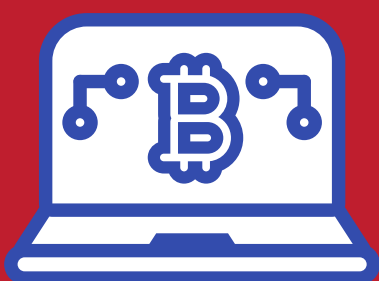

2. Blockchain Storage

Blockchain storage is advised for protecting sensitive data and enhancing accountability and trust among all the parties involved. SMEs, in particular, need this kind of technology to tackle scale, efficiency, and quality challenges.

3. Product Data Sharing

Data sharing through blockchain has many possibilities that can be valuable for businesses, as it ensures higher product quality, secure traceability, and safety management.

4. Data Transmission

DLT transactions are duplicated and distributed across the whole network and as such, this process offers added security and transparency.

5. Decentralised Cloud Storage

Decentralised Cloud Storage (DCS) platforms are increasingly popular for data storage and management, as they offer practical solutions for securing information with no maintenance costs.

6. InterPlanetary File System

InterPlanetary File System is a "content-based system with a peer-to-peer architecture which uses existing, established technologies and combines them in a completely new way".
